With regards to: Ellis Investigation Group (EIG).

To whom it may concern,

Several years ago Mitton Valve Tech (MVT). engaged the EIG to investigate the potential theft and misuse of our proprietary and patented technology. We suspected that one of the companies we were associated with had less than honorable intentions towards MVT, and were engaged in pirating and illegal manufacturing outside of their approved licenses.

EIG conducted inquiries and ground surveillance over a 3 month period of the suspected companies and persons. EIG provided us with real time information as well as regular written and verbal reports of his progress.

Their reports and the subsequent information they provided allowed us to structure questions and examinations that allowed us to attain a satisfactory outcome in Provincial Court.

EIG was able to relay details of activities and movements of key personnel that where key to our case.

I would like to express our satisfaction with EIG's services and would highly recommend them to any variety of companies and or persons in need of investigative services.

Sincerely,

Michael J. Mitton
(President)
